

4/10

**Scribe:** Prachi Soni

**Minutes:** 7:02-7:23

### General Notes

- Ramiro dropped out of class, 5 instead of 6 people (status update)
- If help is needed, reach out and we can discuss the task or the issue
- Please make sure you are updating your release notes and updates your minutes for the week
- Make sure that you are consistently committing your changes, making consistent commits to your feature branch, once done push your changes to the main branch
- Make sure storyboard is updated

### Project Progress

- Implemented Spotify connection stuff, along with registration stuff through our database
- A log of general stuff completed
  - Nav bar
  - Design
- Challenges? → Nothing really so far
  - Some struggles today in lab, but all issues were resolved
- Weekly sprint, we don't have enough time so don't get stuck for long periods of time
- Tahn
  - Finished Lab 11 with Unit Testing
  - Login, Register
  - Logout button
  - Footer
  - API Routes when you open the website, etc.
  - Just the management of the login session for the MoodTune account
    - Checks if the user is checked in, else it redirects them to register, etc.
  - Add more description to story
    - Add middleware implementation or something like that
- Robby
  - Designing pages
  - Resources folder, populated it (images, CSS)
  - Nav bar
  - Getting logos linked to other web pages
  - About to work with JavaScript to improve everything
  - One story for design, should have made one for every page, need to put two
  - Keep same story, add more description to it for pages you are designing

- These are the pages you are working on for the CSS part
- Prachi
  - Spotify recommendation query
  - Previous recs still in todo since its a whole feature that still has to be implemented by itself
    - Need database element
  - User Profile Page drop down
- Conner
  - Spotify authentication
  - Registration
  - User registration through MoodTune
  - Spotify stiff init test and rec queries
  - Requests work by themselves, but the info need to be stored in database
- Maggie
  - Recommendation tab, making sure it is connected ro right commands
  - Picked up extra tasks
  - Going to focus more in the word connection database

### **Presentation/Project Review**

- Login showed
- Homepage, explanation to Spotify account connection
- Statistics displayed
- Genre word selection
  - Classical recommendation example
  - Future plan: two word identification (ex: party, rock)
  - No current error message
- Test buttons explanation, not for user so will be removed
- Refresh token, we will have a function to refresh token after every hour
  - Automatic
- Implemented with Text Box, options given for what Spotify recommendations give
- TA Advice
  - Show default playlist along with error message
    - Query didn't meet any matches, so provide default recommendations

### **Plans For Next Week**

- Database work/connection
  - Previous recommendations
  - Global statistics list
  - Genre blacklist
  - Word connection
